MASTER BUS

COLOUR

MASTER RACK

The DRUMS rack, on any track.

INPUT
-18 dBFS

CEILING
-0.3 dB

01 - WHAT IS IT

WHAT IS MASTER RACK?

The master rack of AudioXL DRUMS, as an effect plugin in its own right.

SAME STAGES, NOT A COPY

The stages are the same ones as in the instrument: what you hear here is what you hear inside DRUMS – now on a track, a bus or the master.

16

MACHINE MODELS

The classic drum-machine converters.

8

DRIVE CHARACTERS

Four from DRUMS, four new.

4

COMP CHARACTERS

VCA, Opto, FET, Vari-Mu.

46

PRESETS

In six categories.

CHAIN

IN → LIMITER

(∞)

02 - THE CHAIN

THE DRUMS RACK, PLUS FOUR

*Read it top-left to bottom-right: the order
sound actually flows.*

FROM DRUMS

Transient, Machine, Drive,
Filter, Comp, Delay & Reverb
sends.

EXTRA

Program EQ, Exciter,
Maximizer, Clipper.

PROTECTION

Autogain in front, a **Limiter**
with a true ceiling, last.

PROGRAM EQ

60 HZ · 12 KHZ

(∞)

03 - PROGRAM EQ

BOOST AND CUT **THE SAME LOWS**

Pultec EQP-1A style. Stepped frequencies, the rest by ear.

LOWS

20 30 **60** 100

BOOST + ATTN on one frequency: the curves differ, so they don't cancel – **bigger kick, less mud.**

HIGHS

3k 4k 5k 8k 10k **12k**

16k

A bell with **BANDWIDTH**: narrow and tall is **air**, wide and low is **presence**.

HIGH ATTN.

5k **10k** 20k

Its own shelf. With the boost: a softer top that keeps the sparkle. RBJ biquads + a blended valve stage.

EIGHT DRIVES, **FOUR COMPRESSORS**

DRIVE

With tilt EQ, parallel mix and envelope-keyed noise.

TAPE

the most neutral

TUBE

even harmonics, warm

CLIP

hard, modern

FOLD

turns back on itself

GERMnegative half first,
thick**DIODE**

the gentlest

RECT

octave up, dirty

CRUSH

a broken converter

■ FROM DRUMS ■ NEW

COMP

Same engine, four behaviours: 8 ms on FET is not 8 ms on VARI-MU.

VCA

precise

OPTO

holds together

FET

fast, gritty

VARI-MU

ratio grows with level

EXCITER

Regenerates the top above FREQ instead of EQ-ing it.

TUBE**TAPE****DIODE**

DENSITY, PEAKS, CEILING

MAXIMIZER

0-200 %

One knob, a **fixed 180 Hz split**: tape weight on the lows, valve presence on the highs, make-up that grows with AMOUNT. 0 % is an exact bypass.

CLIPPER

5 curves

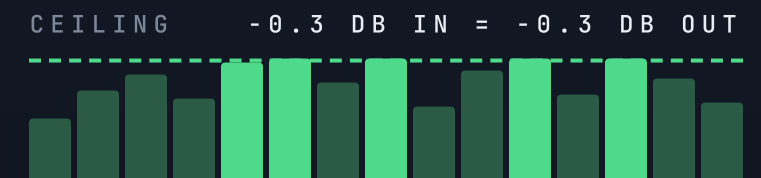

No gain to breathe: it shaves the peak sample by sample. **Hard · Soft · Cubic · Fold · Diode** – colour changes, volume doesn't.

LIMITER

2 ms

Fixed lookahead, reported to the host and compensated. DRIVE **0-18 dB**, RELEASE **10-500 ms**, and a CEILING that is **measured, not estimated**.

AUTOGAIN

+ 7.4 DB → - 18 DBFS

(∞)

06 - AUTOGAIN

EVERY STAGE IN THE RIGHT PLACE

Thresholds are absolute decibels. Autogain feeds them what they expect.

TARGET

Brings the input to **-18 dBFS RMS**, the level the chain is calibrated for.

NOT A COMP

Moves over seconds, respects the dynamics. Stops below **-60 dBFS**.

TWO SPEEDS

Quick to lower, slow to raise: a transport stop isn't a fade-out.

READOUT UNDER THE AUTOGAIN BUTTON · EXAMPLES

+7.4 dB → -18 dBFS

RAISING · QUIET MATERIAL

-5.1 dB → -18 dBFS

LOWERING · LOUD MATERIAL

-60 dBFS · stops below

-18 target

0

INPUT METER: IDLE · WORKING · HOT · CLIPPING

SYNC

DRUMS · CHAIN TAKEN

(∞)

07 - AUDIOXL SUITE

TAKE THE CHAIN FROM DRUMS

No setup: AudioXL plugins find each other, even across processes.

SYNC DRUMS

The whole DRUMS rack arrives as it stands – and bypasses over there.

CLEAN START

EQ, exciter, maximizer, clipper switch off. **The limiter stays.**

PADLOCK

Open: follows DRUMS. **Closed:** your preset is protected.

STATE 1

SEPARATE

DRUMS keeps its rack.

STATE 2

WAITING

Engages when DRUMS arrives.

STATE 3

CHAIN TAKEN

This rack colours now.

Same switch as **SYNC MASTER RACK** in DRUMS – flip it from either side.

Stab · Texture

MASTERING

8

A light hand and a -1 dB ceiling, what platforms
expect.

A SNAPSHOT OF THE WHOLE CHAIN

Clipper and maximizer included. Sync, padlock and autogain stay
out: they are session choices, not sound.

NEVER STOPS THE MUSIC

Demo: 0.4 s of noise every 30 s, faded in and out – the audio is
never cut. One serial, AXR-..., removes it at once.

COLOUR ANYTHING
