01 — WHAT IS IT

WHAT IS AUDIOXL SEQ?

A generative MIDI sequencer for your DAW. It makes no sound — it drives your instruments.

17

INDEPENDENT LANES

Gate, pitch, length, velocity, chord... every aspect of a note lives on its own row, with its own length and direction.

| GATE | HOLD | TIE | RATCHET | LENGTH | CHANCE

| PITCH A | PITCH B | PROB A/B | CHORD | INVERSION

| OCTAVE | TRANSPOSE | VELOCITY | CC 1 | CC 2 | CC 3

16

MIDI PAGES

One per channel: own patterns, harmony and clock. All play together.

16

SCENES / PAGE

Patterns built as the scenes of a performance.

408

FACTORY PRESETS

25 genres, four-part arrangements.

12

SCALES

Pitches are degrees: always in key.

02 - THE CONCEPT

NOT A PIANO ROLL. SEVENTEEN LANES.

Patterns that repeat without ever repeating the same way.

POSITION RULES

Lanes read the **host transport position**.
Stop, seek, loop, tempo: always correct.

PITCHES = DEGREES

“The third degree”, not “four semitones”.
Change key, it **re-harmonises itself**.

POLYMER

Each lane has its own **length 1-16** and **6 directions**. Long patterns, never written out.

POLYMER · 32 STEPS

16 × 7 × 5 = 560 steps

The cycle only closes after **560 steps** – every row stays simple and readable.

03 — THE GRID

EVERY ASPECT, ON ITS OWN ROW

RHYTHM

GATE • HOLD • TIE • RATCHET • LENGTH

PROBABILITY & HARMONY

CHANCE • PROB A/B • CHORD • INVERSION

PITCH

PITCH A • PITCH B • OCTAVE • TRANSPOSE

DYNAMICS

VELOCITY

MODULATION

CC 1 • CC 2 • CC 3

Each row: length 1-16, 6 directions, own dice, rotate, reset and Master Shift.

04 — HARMONY ENGINE

ALWAYS IN KEY

Scale degrees in, MIDI notes out.

SCALES	12 — from Major and the modes to Pentatonic and Chromatic.
CHORDS	10 types on top of every note, built in degrees.
VOICING	Closed · Open · Wide, inversions -2 ... +3.
STRUM	±60 ms, up or down, never overruns the next chord.
TRANSPOSE	Before Scale stays in key; After Scale goes chromatic, on purpose.

FROM STEP TO NOTE

01	GATE → TIE → CHANCE	plays?
02	PITCH A / B (PROB A/B)	degree
03	SCALE + CHORD	voices
04	INVERSION → VOICING	semitones
05	TRANSPOSE (After Scale)	chromatic
06	OCTAVE ×12 + BASE + ROOT	MIDI note

CHORD TYPES

1	5	8	3	s2	s4	6	7	9	11

DICE, SEEDS & LOCKS

RND ALL

RND ALL

On channels 1-4 it doesn't roll dice: it writes a part by role – bass, lead, pad, chords – with the right gate, register and chord. From channel 5 up: pure randomness.

CH1
BASS

CH2
LEAD

CH3
PAD

CH4
CHORDS

LOCK WHAT MATTERS

Cmd/Ctrl + click pins a step: randomise, reset and writing leave it alone. Pin the downbeat, re-roll the rest.

FENCE & GRAVITY

RND MIN/MAX set what's possible. RND OFFSET sets what's likely: a filter high 71 % of the time – that still drops.

ROW DICE

One lane, all its steps.

VERTICAL DICE

One step, every lane.

32
UNDO

Same seed, same sequence.

PRESETS

NEXT BAR

Swap scenes without the groove stumbling.

CHAIN

Scenes play in sequence on their own: 1 ... 16 patterns, 1 ... 8 bars each. Driven by the host's bar — loops never throw it out of sync.

PLATFORM

VST3 · AU · LIVE

(∞)

09 - PLATFORM

BUILT FOR **YOUR DAW**

VST3 LIVE

ABLETON LIVE

A dedicated variant with silent audio and MIDI out, plus the “AudioXL SEQ Virtual” port for the 1-16 channel selector.

AU

LOGIC PRO

A MIDI FX before the instrument, in the same chain. Nothing to compensate.

VST3

BITWIG · REAPER · CUBASE · STUDIO ONE

A MIDI effect before the instrument.

SAMPLE-ACCURATE

Every event at the exact sample, at any buffer size. Optional look-ahead covers Live’s one-buffer MIDI routing delay.

RESIZABLE

1400×742 → 3840×2400, remembered with the session.

LICENCE

One serial, **two computers**. Full 10-minute demo, nothing you write is ever lost.

NEVER THE SAME TWICE

 RND ALL
